PARASPORT FABRICS

Exclusive, hi-tech fabrics made of Teflon coated Cordura thread, assuring rugged durability and lightweight strength together with a high abrasion resistance. Teflon Fabric Protector coating creates a fabric that repels water and oil based spills, but is still breathable, durable, safe and gentle. Fabrics also look new longer, and require easy care. Teflon and Cordura are DuPont Trademarks.

AeroSpeed PA 6.6 fabric with a specific texture (similar to a golf ball) used to produce an even high-speed airflow deflection for improved stability. The internal Teflon finishing is designed to be windproof, but highly breathable

WindMax Cordura/Teflon fabric, with same strength and durability features of Cordura fabrics, but lighter and more comfortable

Dynamo 4-Way stretch fabric, peeling free, with the correct percentage of elastic thread to be just enough stretch to give a comfortable fit, not interfering with jumpsuit performance

Cordura Rugged strength, heavy-duty fabric. Used where higher protection or stiffer fabric is required

Performance Lining A 100% PA soft mesh, as a layer between body and WindMax or AeroSpeed for a unique comfort

WindFlex 2-Way stretch Cordura/Teflon fabric, combines strength with unsurpassed fit and comfort

PRODUCT'S FEATURES

Custom size: a minimum set of measurements is necessary to manufacture a made-to-measure jumpsuit for a perfect fit. Standard sizes also available

CAD/CAM system: able to automatically create a custom fit pattern starting from a user set of measurements

Laser cutting table to guarantee the always precise, no frays fabric cut

4-Way Stretch: Dynamo fabric inserts give maximum freedom of movement

2-Way Stretch: Windflex fabric gives better fit without losing fabric toughness

Ergonomic Design allows comfortable fit
